

Contact us to arrange the presentation of the Water Station in your school.

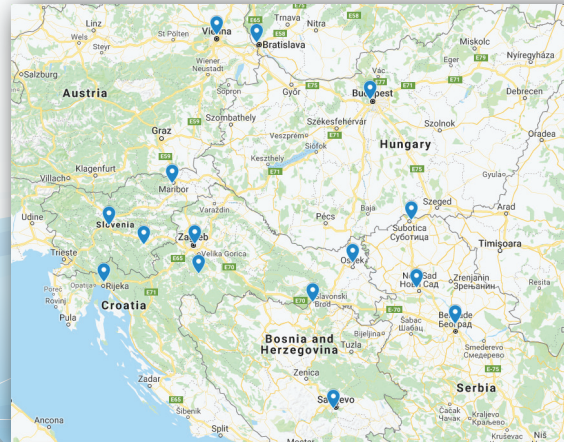

Today's children, students in the future will manage our environment, so it is important that they know and understand it better. We help them develop a responsible attitude towards nature and water resources, to preserve them for the generations that come after them. Drinking water flows from the tap to all of them, also. Project Water agent can help you in this.

By your conscientious behavior be a role model to others, help them develop a responsible relationship with nature and water resources.

INTERNATIONAL PROJECT

**Have you ever wondered How much water do you spend a day?
Do you spend more or less than others?
No, are you?**

Then join us and you will get the answers quickly.
And this information will easily be exchanged with other participants in the project.

The Water agency Association

works in the field of nature protection and education and on water conservation. With our activities, we improve the preservation of water as a natural resource and the necessity of its rational consumption. On that way we building project the Water agent. We invite you to join us in the project.

PROJECT IDEA

- Education about nature protection and water resources
- Raising awareness about the water resources protection necessity and responsible attitude towards water
- Establishment of rational water consumption

PROJECT OBJECTIVE

- Raising awareness and changing the everyday habits of children and adults in the direction of rational water consumption and reduction of wastewater
- Rationalization of drinking water consumption

Raising awareness is a process that takes place, so it is never too early to start!

EDUCATIONAL PACKAGE

of the project The water agent contains:

- a measuring device of monitoring water consumption
- an application for entering data consumption and
- a mobile water station.

Measuring device

The measuring device is installed directly on the faucet and reads the amount of water flowing out. We read the data directly on the device and thus we have control over the everyday habits. We can compare our data with the data of other participants in the project.

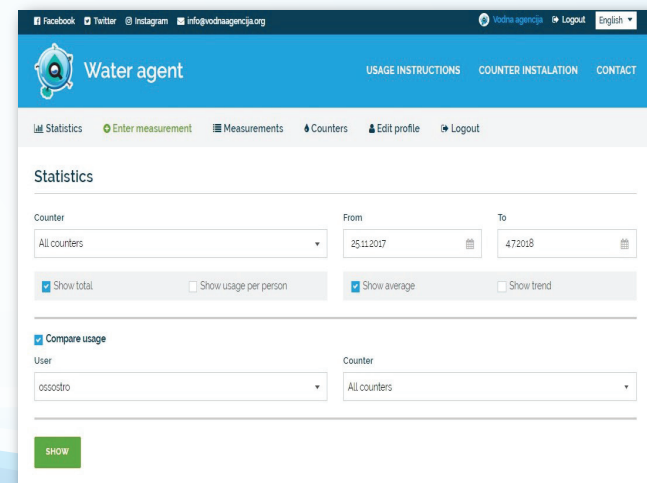

Through the input and exchange of data, is created that the possibility we all use water and have responsibly, for water resources because they are not unlimited.

Internet/ mobile application

Data from the measuring device is read daily, weekly or monthly, and we enter it into the application at <http://www.wateragent.eu>

Unlimited data entry for different classes with different numbers of students is possible

The application also provides insight into water consumption and enables graphical display. So we get a precise insight into the consumption of water in a certain period.

Set with your students specific goals of water consumption rationalization and try to reach them. In this way, you get used to rational consumption and encourage the reduction of drinking water consumption

Waterstation

As part of the project, schools have the opportunity to introduce a water station in the school. The water station contains technical elements of plumbing and sewerage infrastructure and home installations that are presented to students in an interesting way. They get answers to various questions:

Why is water so important?

How does water come to the surface of the earth?

Where does the water flow to the tap?

Who cares about the water supply network?

Where is the water used?
